

Product Discontinuation Notification

Document availability: **Public**

Title: Discontinuation of GigE uEye RE cameras with PoE

Affected Product:	IDS GigE uEye RE cameras with PoE (detailed list of models in document) <ul style="list-style-type: none">• UI-5xxxRE POE
Document Version:	1.1 Invalidates the former version 1.0 of this document from March 8, 2022
Release date:	May 19, 2022

Reasons and Description of the Product Discontinuation

IDS has released the uEye FA (Factory Automation) camera series in 2017. The uEye FA camera family is the successor of the uEye RE (Rough Environment) camera family with PoE (Power-over-Ethernet).

IDS sets a strong focus on releasing new cameras based on up-to-date camera platforms like the uEye FA family. The uEye RE camera with PoE family is discontinued.

Recommended action for customers

IDS recommends its customers to check demands and place orders until the last time buy date. We are able to recommend alternative uEye FA cameras. That uEye FA cameras offer most recent sensors and a more powerful camera hardware. The physical dimension of the uEye RE PoE and the uEye FA are slightly different and need to be adjusted. The ethernet and I/O camera connectors need to be changed when switching from uEye RE POE to uEye FA camera models. For any question regarding last time orders or successor models, please contact our sales team.

Update: Important Dates in Document Version 1.1

Driven by the components shortage situation and to continue shipping products, IDS decided to suspend the last time buy and last time shipment dates for the GigE uEye RE cameras with PoE for the time being. These cameras are not affected by the components shortage situation and can be continued for shipping.

End of Sale	Last Shipment Date	End of Support
suspended for the time being, new date to be announced	suspended for the time being, new date to be announced	suspended for the time being, new date to be announced
